

**W - 120 A****Flow Controlled  
Self Reversing 4/2 Valve, 10 mm**

Series WOFB ...

80 l/min, 210 bar

- with ISO 4401 / CETOP R35H size 5, NFPA D05, DIN 24 340 A10 interface
- automatic, load-independent reversal
- predefined actuator direction at start-up
- no reversal pressures to set
- simple construction (only one moving part)
- long service life

SYMBOL

WOFB - 10

DESCRIPTION

The valve produces automatic reciprocation when connected, for example, to a hydraulic cylinder.

When the cylinder reaches the end of its stroke, or when the load pressure rises to the relief valve setting, there is no longer any flow through the valve. The cessation of flow causes the valve spool to shuttle to its other end position and consequently the actuator moves in the reverse direction. The reversal process is virtually independent of the load pressure.

The process continues as long as the specified minimum flows and pressures are produced by the pump.

In order to set the system pressure limiter, it will be evident that the self-reversing function of this valve must be blocked:

See **SETTING SYSTEM RELIEF VALVE**

The valve is designed in such a way that when pressure is connected to the P port the first flow condition is always  $P \Rightarrow B / A \Rightarrow T$ . This means, for example, that where an unequal area cylinder is used on a machine with strict safety requirements, then the A port of the valve should be connected to the full bore end of the cylinder and the B port to the annulus end (e.g. compactor circuits, where the first cylinder movement must be to retract).

## DIMENSIONS

## SYMBOL

## SETTING SYSTEM RELIEF VALVE

1. Switch off pump, alternatively reduce pressure to minimum ( $p = 10$  bar max.).
2. To set the system relief valve, first block the automatic reversal of the WOFB-10. Remove the dome nut (lt.13), turn the offsetting spindle (lt.5) clockwise until it hits inner end stop. The spool is now clamped  $P \Rightarrow B / A \Rightarrow T$ .
3. Start the pump. Set the required relief pressure.
4. Stop the pump.
5. Turn the offsetting spindle anticlockwise until it hits outer end stop, then replace the dome nut.

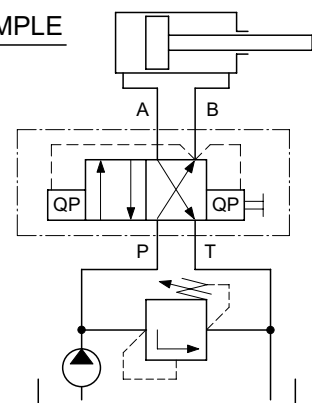

**CAUTION:** Never turn the offsetting spindle (lt.5) when the valve is pressurised, as this can cause seal damage. If necessary, switch off the pump.

## SAFETY NOTE

When the pump is switched off (e.g. emergency switch in the plant), the valve spool will reset to  $P \Rightarrow B / A \Rightarrow T$  (the "Pump Start" position) after 0,5 secs (measured with fluid viscosity 33 cSt). The cylinder, connected as shown in the APPLICATION EXAMPLE, is ready to retract.

Deviation from the circuitry shown in the APPLICATION EXAMPLE, and changes in the fluid viscosity can result in an increase in the minimum required reversal time.

## APPLICATION EXAMPLE

## SCHEMATIC SECTION

## COMPONENTS / SERVICE PARTS

It.	Qty.	Description		
1	1	Valve body	71 x 70 x 97	
2	1	Self-reversing spool assy.	ø 18 x 81	
3	1	Spring cap	SW 30 x 48,5	
4	1	Plug	SW 30 x 31	
5	1	Offsetting spindle	ø 11 x 49	
6				
7				
8	2	Spring	2,2 x 14,9 x 33	iG = 8,5
9	4	Cap screw	M6 x 40	8.8 DIN 912
	1	Seal kit no. DS-151, comprising *):		
10	2*	O-ring no. 118	ø 21,89 x 2,62	N90
11	5*	O-ring no. 014	ø 12,42 x 1,78	N90
12	1*	O-ring no. 011	ø 7,65 x 1,78	N90
13	1	Dome nut	M10	PA 6.6 DIN 1587
14				

\*) Part of seal kit no. DS-151  
 available as service part

### TO ORDER SERVICE PARTS, STATE:

- complete unit model code from the nameplate including the design number
- data sheet number, including issue date
- part item number from above list
- part description from above list
- quantity required

## INSTALLATION AND SERVICING

MUST BE CARRIED OUT WITH CARE  
 AND BY QUALIFIED PERSONNEL ONLY

When servicing the valve (cleaning, seal change etc.) note the following:

1. Unscrew and remove dome nut item 13, spring cap 3 and plug 4.
2. Remove the 2 springs item 8.
3. Carefully slide out the self-reversing spool item 2.
4. The self-reversing spool item 2 is asymmetric and must not be reinserted the wrong way round, otherwise the normal Pump Start function  $P \Rightarrow B / A \Rightarrow T$  will be reversed to  $P \Rightarrow A$

/ B  $\Rightarrow$  T.

The correct spool orientation can be identified by the 2 small radial holes. The spool is factory-inserted so that these 2 holes are above the B port of the hydraulic interface.

5. When fitting new seals ensure that they are first well oiled or greased.
6. Before refitting the spring cap item 3, the offsetting spindle item 5 must be fully retracted into the spring cap allow the spool to oscillate freely.
7. Observe the correct tightening torques for spring cap item 3 plug 4 and plastic dome nut 13.

## MAIN CHARACTERISTICS

Type	4/2, self-reversing
Design	spool
Mounting method	manifold mounting
Size	ISO 4401 size 05 interface
Mass	3,00 kg
Mounting attitude	unrestricted
Flow direction	see symbol
Operating pressure	60 ... 210 bar
Fluids	higher pressures - contact HTF hydraulic oils HL and HLP to DIN 51 524, other fluids - contact HTF

Min. fluid cleanliness	18/14 to ISO 4406/CETOP RP70H 8 ... 9 to NAS 1638
Fluid temperature range	-20° ... +60° C
Viscosity range	20 ... 200 cSt
Flow range	Q $P \Rightarrow A / A \Rightarrow T$ = max. 80 l/min $P \Rightarrow B / B \Rightarrow T$ = min. 10 l/min $P \Rightarrow B / B \Rightarrow T$ = max. 40 l/min
Cylinder area ratio (see performance curves)	recommended $\phi$ = 1 ... 1,5 permitted $\phi$ = 1 ... 2
Cylinder internal leakage at p = 210 bar	max. permissible = 0,7 l/min

## APPLICATIONS

- e.g.
- compactor controls
  - container compactors
  - slurry scrapers
  - piston-type intensifiers

PERFORMANCE DATA Oil viscosity 33 cSt

MODEL CODE KEY

4/2 self-reversing valve

A ... Q = **standard**-model per current data sheet

Z ... R = special features by arrangement

10 = ISO 4401 size 5 interface

Blank = Nitrile seals (**standard**)

V = Viton seals

for special seals - contact HTF

1 ... 9 = design no. (omit when ordering)
